

**AMENDMENTS TO THE SPECIFICATION:**

Please replace paragraph [0107] with the amended paragraph:

Advantageously, a larger number, or at least three accelerometers (~~29~~) 29, are integrated into input means (~~10~~) 10. This, on the one hand, makes for greater precision for the coordinates of point P and, on the other hand, a redundancy is created, which results in greater operational reliability.
